1. At various strategic points along the Dospat-Batak road between points N 41-46-30 and E 24-09-00 there are approximately 15 impediments of cement or partial cement construction. The composition and dimensions of the blocks are described as follows:
  - a. A structure of cement, or of cemented rock; length - three meters, height - two meters, and width varying from two to three meters, depending on the width of the highway at that point (i.e. wider than two meters at a wider point on the road); and
  - b. An obstacle of cemented wooden logs mounted on wooden rollers held in place by two wooden posts. The obstacles measure approximately two meters on each side.
2. The cemented log impediment is presumably moved into position between two cement or cemented rock structures when the necessity arises.
